ABOUT ME

I am a multidisciplinary design student focused on industrial design.

I am currently in my 4th year at the Ecole Nationale Supérieure de Création Industrielle in Paris, France.

I am fascinated with the combination of different mediums fostering multi-disciplinary abilities to solve creative

problems in a sustainable way. Today, I consider design as a practice as a tool enabling social links, enhancing the value of territories by locally developing circular economy initiatives that are federating and in solidarity. I want to center my design practice around these fundamental issues by **anchoring my projects in territories with their own resources and know-how.**
